

28th June 2018

To whom it may concern

This is a follow up to our earlier reference for Towai Technologies' products dated 24 August 2015.

Since then we have installed more Towai Applicators including:

A full rollout for a harbour ferry company comprising:

Four passenger ferries.

Two vehicle ferries where the day tanks are dosed during fuel transfers while at sea on passage to the gulf islands regardless of how rough the sea conditions are.

A 41,000 litre bulk tanks which provides dosed fuel to the remainder of their fleet not fitted with Applicators.

A 55,600 litre bulk tank which provides dosed fuel to the other Auckland ferry company plus to the pleasure boats berthed at Auckland's largest marina. Around 1.25 million litres of fuel is dosed every month. This installation includes a modem and antenna to enable commands and responses to be sent and received over a cellular network.

A 20,000 litre bulk tank which provides dosed fuel to road construction vehicles.

We have ordered a further Fuel Flow Applicator and three Maxi Applicators fitted with modems and antennas to enable commands and responses to be sent and received over a cellular network.

We are very pleased with both Towai Technologies and their products. Ron Longley is very cooperative and helpful and it is a pleasure to work with him.

Again, we have no hesitation in recommending Ron and Towai Technologies' products.

Yours faithfully

Peter McGregor
Director
