

Fuel Additive Applicators - Photo Gallery

FULLY AUTOMATIC

Fill and Forget Technology! Once installed and programmed the FAA is designed to fill and forget. A combination of complex algorithms and sensors determine when you have refueled, and how much of the additive to inject into your new fuel load. Once programmed, simply keep the FAA full of your preferred fuel additive.

NO DRIVER INPUT REQUIRED

ACCURATE DOSING

DURABLE CONSTRUCTION

Polyethylene additive reservoir and baked on powder coat finish mounting cradle with all industrial quality components, makes the FAA able to withstand harsh operating environments.

EASY INSTALLATION

The FAA can mount anywhere and only requires 12, or 24 volt power, plus access to the equipment's fuel vent and fuel level sender. Installation generally takes only 4 hours by an experienced technician.

CAN J1939 NETWORK

Can be connected to the vehicle or equipment CAN Network for the fuel level signal and vehicle speed.

TELEMATICS CAPABLE

The FAA can support telematics solutions - satellite or cellular based. Some interface development would be needed.

Vehicle & Equipment Types With Applicators Fitted

New Zealand & Australia Installations

North America Installations

Solenoid Valve & Fuel Tank Vent Adaptor

FULLY AUTOMATIC

- No driver or operator involvement
- Automatically doses at each fuel fill
- Set any additive dosing ratio
- Accurate and automatic every time
- Doses fuel tanks or into fuel flow

RUGGED COMPACT DESIGN

- All key components protected inside unit
- Long life pump & solenoid valve
- Industrial specifications
- Control board conformal coated
